[info@jigonline.com](mailto:info@jigonline.com)

### ***JIG has joined, and will be providing expert technical guidance to the IATA Technical Fuel Group Biocide Task Force.***

*Due to the COVID-19 pandemic, many airlines are treating fuel on parked aircraft with biocide to control microbiological growth in the fuel system of the aircraft, in engines and aircraft where biocides are approved by the respective OEMs. These procedures may result in significant challenges when re-starting operations.*

*A key task will be to propose solutions for handling volumes of fuel treated with biocides or possibly contaminated by MBG on parked aircraft. JIG will provide further guidance to members when the task force reaches its conclusions.*

*If you have any questions relating to JIG, please email [info@jigonline.com](mailto:info@jigonline.com) or visit [www.jigonline.com](http://www.jigonline.com)*
